Before You Begin

The DIR-412 features a hardware switch that enables users to switch between WAN mode and 3G router mode.

When the DIR-412 is operating in WAN mode, WAN connectivity is achieved via the DIR-412's Ethernet port. In this mode clients need to access the DIR-412 via the wireless connection. When the DIR-412 is operating in WAN mode network connectivity is more resilient as Internet connectivity can be failed over to a backup 3G connection, if the main WAN connection fails.

When the DIR-412 is in 3G router mode, LAN clients can access the DIR-412 via the Ethernet connection, as well as via the wireless connection.

LEDs (from left to right)

Power LED

An orange light indicates the router is booting. A solid green light indicates a proper connection to the power supply. If the LED blinks orange the router has failed.

Internet LED

A solid green light indicates a successful 3G connection. A solid orange light indicates a 3G error, a WAN failure, or a system failure. A blinking green light indicates that the WAN connection is enabled when the Router is operating in WAN mode.

WLAN LED

A solid light indicates that the wireless segment is ready. This LED blinks during wireless data transmission.

Ethernet LED

A solid light indicates a connection to an Ethernet-enabled computer. This LED blinks during data transmission.

3G Router Mode Setup

Step 1 - Move the mode switch to **3G Router**. While in this mode, the DIR-412 will use the 3G modem* to connect to the Internet.

Step 2 - Plug the 3G modem into the USB port of the DIR-412.

Step 3 - Plug one end of the Ethernet cable into the DIR-412. Plug the other end of the cable into your PC's Ethernet port. You may also connect to the router wirelessly.

Step 4 - Wait up to 1 minute. In most cases, your 3G modem will automatically connect to the Internet. If you do not connect and/or want to configure the advanced features, follow Step 5.

Step 5 - Open a web browser and go to **http://192.168.0.1**. Enter **admin** as the user name and leave the password field blank. You may use the Setup Wizard to configure your DIR-412.

* The DIR-412 may work with major carriers such as AT&T, Verizon, Sprint, T-Mobile, Telus, Bell, Rogers, etc.
