

# Quick Install Guide

## Wireless N Nano USB Adapter

Thank you for purchasing the Wireless N Nano USB Adapter. Follow the easy steps in this guide to properly set up your adapter. Please verify that all the package contents listed below are available.

### Package Contents

-  DWA-131 Wireless N Nano USB Adapter
-  CD with driver, software, and manual
-  Quick Install Guide

If any of the above items are missing, please contact your reseller.

### System Requirements

- A desktop or laptop computer with an available USB slot
- Windows® 8 or 7
- 300MHz processor and at least 64MB of RAM
- CD-ROM drive
- An 802.11n or 802.11g wireless network

## DWA-131

### What This Product Does

The D-Link DWA-131 USB adapter is a 802.11n client device that delivers unrivaled wireless performance for your laptop or desktop computer. Once connected, access your network’s high-speed Internet connection while sharing photos, files, music, video, printers, and storage.

### Before You Begin

Before installing your new D-Link wireless adapter, please verify the following:

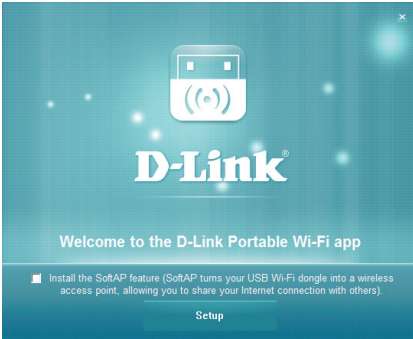

- Remove any previous installations of wireless adapters.
- Disable any built-in wireless adapters.
- Verify the settings such as the wireless network name (SSID) and security settings of the network(s) you want to connect to.

**Note:** *If you’ve installed a different manufacturer’s adapter or a different model D-Link adapter, make sure the software is uninstalled before installing the new software. Some utilities may cause a conflict with the new software.*

### Installation

**Note:** Do NOT plug the adapter into your computer before installing the drivers.

Insert the DWA-131 Driver CD in the CD-ROM drive. When the autorun screen appears, click **Setup**. If you wish to install the SoftAP software, which will turn your computer into an access point and allow wireless clients to connect and share your internet connection, check the **Install the SoftAP feature** checkbox and click **Setup**.

**Note:** *If the CD Autorun function does not automatically start on your computer, go to Start > Run. In the run box type “D:\autorun.exe” (where D: represents the drive letter of your CD-ROM drive) and click OK.*

When the installation finishes, click **Complete**. The DWA-131 driver is now installed. You may now insert the DWA-131 into your computer’s USB port, and connect to a wireless network using your computer’s operating system.

See *Connecting to a Wireless Network* in the user manual for information about how to connect to your network using your DWA-131.

If you chose to install the driver without the SoftAP feature but now wish to install the SoftAP feature, re-run the installation software and select **Install SoftAP**. Refer to the *Using SoftAP* section in the user manual for more information.

### Technical Support

Having trouble installing your new product? D-Link’s website contains the latest user documentation and software updates for D-Link products. U.S. and Canadian customers can contact D-Link Technical Support through our website or by phone.
