1.03B12_WW	WW	Nov. 22, 2010	DSR-500/500N/1000/1000N	A1
1.02B25_WW	WW	Oct. 11, 2010	DSR-500N, DSR-1000N	A1
1.02B11	WW	August 10, 2010	DSR-500N, DSR-1000N	A1
1.01B50	WW	April 30, 2010	DSR-1000N	A1

## Important Notes:

1. From firmware v1.04B58 and later, all DSR routers with WW version are not allowed to install RU firmware image in order to prevent unnecessary misunderstanding for customers.
2. Before plug DWM-152/156 3G USB dongle in DSR-1000/1000N, please make sure the SIM Card is Not set PIN code.
3. Microsoft Windows XP has some well-known limitation to access USB storage of DSR router, D-Link provides a Registry Script file named: WinXP.reg which can solve limitation of Windows XP environment. Without applying this script file, it cannot copy file from Windows XP to USB storage. (This issue will not happen when copy file from USB storage to Windows XP)
4. After firmware 1.04B58, new user database architecture is introduced. The new user database is easier to setup and more intuitively to use. When users upgrade DSR's firmware to 1.04B58 or later, DSR will automatically merge users in the old database into the new one. However, all

new settings including new created users, firewall rules and application rules would be SWEPT AWAY and ONLY users, firewall rules and application rules being configured in the previous firmware will be kept when users downgrade firmware from 1.04B58 to the older one, e.g. 1.03B43. Please keep in mind: backup your configure file for further recovery once you decide to downgrade firmware to the older version.

5. For any firmware downgrade situation, i.e. from a newer version to an older one, it will take more time to restart system comparing to firmware upgrade, i.e. from an older version to a newer one. If you MUST execute firmware downgrade for your own reasons, please allow DSR more time to reboot system. It will take around 3 minutes at least for this case.
6. DHCP reserved IP feature is changed to support "inside DHCP IP pool range" in order to meet common behavior in networking industry. Old DHCP reserved IP entries will still be valid. When creating a new DHCP reserved IP, it has to follow newer behavior.
7. To authenticate SSL VPN users through external databases including RADIUS, LDAP, AD and POP3, admin must also need to create user accounts with the same username and password in the local user database.

## **Notes for Configuration Auto-Backup/Restore in USB Storage**

D-Link DSR router series support configuration backup or restore automatically while a USB drive is inserted. Following information instructs what condition will perform backup/restore.

1. The router configuration will be automatically backed up to the USB drive as soon as the USB drive is inserted. The back name has format <Model Name>\_<Serial Number>.cfg provided this USB drive doesn't have a backup configuration file from a DSR router already present.
2. The system LED on the router blinks 3X in amber to indicate a backup operation has started.
3. The configuration in the USB drive can be updated if the user manually clicks 'Save Settings' in any GUI page and provided the Model Number and the Serial Number of the router matches with the file already present in the USB drive.
4. In case of reboot, the router checks for the presence of configuration file (with format ModelName\_SerialNumber.cfg). If found, the configuration from the USB drive is restored on the router. If a configuration file with the correct format is present in both connected USB drives, the configuration from the first USB drive will be used to restore the router.
5. The USB drive can have only one configuration with the above mentioned format for each model name.
6. If the USB drive is plugged in to the router which is in factory default state, then during reboot, no backup is taken since no custom configuration file exists in the router by that time. The custom configuration is stored on the USB drive once the user clicks Save Settings in any GUI page.

## **Upgrading Instructions:**

### **Upgrading by using Web-UI**

Please use GUI upgrade feature to upgrade to this firmware version. For detailed installation and upgrade instructions, please refer to the Firmware Upgrades chapter in the *Unified Services*

## New Features:

Firmware Version	New Features
1.09B61_WW	1. More 3G USB dongles support: add D-Link DWP-156 A1 and DWP-157 A1.
1.09B59_WW	None
1.09B38_WW	<ol style="list-style-type: none"> <li>1. L2TP client mode enhancements: support MPPE and demand dialing.</li> <li>2. User DB enhancements: support PPTP/L2TP tunnels external authentication though AD, LDAP and POP3.</li> <li>3. Bridge mode enhancements: support QoS and firewall rules.</li> <li>4. Spillover mode enhancements: both WAN1 and WAN2 will respond requests, e.g. ICMP, IPsec, etc., from Internet even when spillover threshold is not triggered.</li> <li>5. PPTP VPN enhancements: allow PPTP servers to assign remote clients the same subnet as the local LAN.</li> <li>6. Russia Dual Access enhancements: allow users to designate the outbound interface for IGMP control packets.</li> <li>7. Web GUI enhancements: support auto parameters fill-out in the DHCP server configuration page.</li> <li>8. CLI enhancements: support the "space" character.</li> <li>9. More 3G dongle supports: add D-Link DWM-156 A7, D-Link DWM-157 B1, and D-Link DWM-158 D1, HUAWEI E303.</li> <li>10. A new click button to quickly download Dbglogs.</li> <li>11. A new checkbox to enable/disable auto config backup.</li> <li>12. A new checkbox to enable/disable config file encryption.</li> <li>13. Support a Windows-based config viewer for encrypted config files.</li> </ol>
1.08B88_WW	None
1.08B77_WW	None
1.08B51_WW	<ol style="list-style-type: none"> <li>1. Support more external Authentication server types for Captive Portal/SSL VPN/ IPsec user authentication. Available external authentication server types: NT domain, RADIUS, LDAP, AD and POP3.</li> <li>2. Support L2TP Client Mode: DSR can establish site-to-site L2TP tunnels to another DSR.</li> <li>3. Bandwidth Control enhancement: DSR can accept IP subnet for source IP addresses when configuring bandwidth management profiles</li> <li>4. Support GRE tunnels. Supported GRE tunnel numbers varies in different models - DSR-1000 series: 20; DSR-500 series: 15 ; DSR-250 series: 10; and DSR-150 series: 5.</li> <li>5. Support Layer 2 Bridge Mode: DSR can bridge DMZ (WAN2) with LAN port 1 in the Layer 2 level together. <i>Note: Only DSR-500 and DSR-1000 series support Layer 2 bridge mode.</i></li> <li>6. Expand maximal IP-MAC binding (DHCP IP reserved) restrictions. Maximal numbers varies in different models - DSR-1000 series: 128; DSR-500 series: 96; DSR-250 series: 64; and DSR-150 series: 32.</li> <li>7. Support CAPWAP pass-through: DSR can recognize CAPWAP tunnel packets</li> </ol>

	<p>and allow them passing through LAN sides.</p> <ol style="list-style-type: none"> <li>8. Support D-Link DWM-157 A1 USB 3G modem.</li> <li>9. Increase IPsec pre-shared key length to 64 characters.</li> <li>10. IGMP enhancement: allow IGMP packets traversing DSR without specifying source IP addresses.</li> <li>11. Reduce Boot-up spent time.</li> <li>12. L2TP performance enhancement</li> </ol>
<p>1.06B53_WW</p>	<ol style="list-style-type: none"> <li>1. From firmware v1.06B53 and later, DSR-1000N, DSR-1000, DSR-500N and DSR-500 can support USB 3G modem which including D-Link DWM-152 A1/A2/A3, DWM-156 A1/A2/A3/A5/A6, Huawei E1550, E173 and EC306. <i>Note: Only DSR-1000N and DSR-1000 can support to configure 3G USB modem as the 3<sup>rd</sup> WAN interface.</i></li> <li>2. Support VLAN functionalities on WAN interfaces.</li> <li>3. Support multilingual Web GUI through Package Manager. This solution is firmware independent which can easily check available language list through Internet by one click. After that, it can dynamically install/uninstall language pack. <i>Note: only one language pack can be installed at a time in order to prevent consuming much Flash memory. Please remove the installed language before add any other language pack.</i></li> <li>4. USB 3G modem driver can be dynamically uninstalled/install through Package Manager. <i>Note: Following 3G modem driver has already been built into firmware v1.06B53. D-Link DWM-152 A1/A2/A3, DWM-156 A1/A2/A3/A5/A6, Huawei E1550, E173 and EC306.</i></li> </ol>
<p>1.06B43_WW</p>	<ol style="list-style-type: none"> <li>1. Support basic OSPFv3 functionality on IPv4.</li> <li>2. New USB 3G dongles support: D-Link DWM-156 A5/A6, Huawei E1550, E173 and EC306. (DSR-1000N/1000 only)</li> <li>3. Support VLAN-based access control for USB Printer sharing and Storage Sharing.</li> <li>4. Support Russia dual access PPPoE.</li> <li>5. Support Wireless Distribution System (WDS). This feature is Only guaranteed to work between DSR routers of same model. For example, between two DSR-1000N, or between two DSR-500N. A max of 4 WDS peers can be specified, more detail please refer to the DSR user manual v1.05. <i>Note: Using same firmware version between two DSR routers for WDS feature is strongly recommended.</i></li> <li>6. Firewall rules enhancement: support IPv6 firewall rules, allow users to select designate ports other than a sequent IP range, and allow users to select both TCP and UDP in one firewall rule.</li> <li>7. Support IGMP control package forwarding from WAN to LAN.</li> <li>8. Reduce WAN failover time to 1 minute.</li> <li>9. Support IPv4 DHCP relay through IPsec VPN tunnels.</li> <li>10. Support Captive Portal authentication through external RADIUS server.</li> <li>11. Allow both HTTP and HTTPS connections to the Captive Portal Login page.</li> <li>12. Support bandwidth management on the "inbound" traffic.</li> <li>13. Add a new option, threshold configuration, in the Block UDP flood settings.</li> <li>14. VPN failover. (DSR-500/500N/1000/1000N ONLY)</li> <li>15. Improve PPTP/L2TP performance.</li> </ol>

	<ul style="list-style-type: none"> <li>16. Allow to change MTU size for 3G connections.</li> <li>17. Extend IPsec Mode Config support to the following VPN clients: Netgear Prosafe VPN client (v5.02.001 or later), Greenbow VPN client (v4.65.003 or later) and Shrew Soft VPN client (v2.1.6 or later).</li> <li>18. WLAN scheduling improvement: Add a drop-menu called "Schedule control" with Turn-on and Turn-off options to control DSR WLAN ON/OFF.</li> </ul>
1.04B58_WW	<ul style="list-style-type: none"> <li>1. New IPv6 features include IPv6 over PPPoE and IPv6 prefix delegation.</li> <li>2. IPv6 web management enhancement.</li> <li>3. Support DHCPv6 leased-clients pages.</li> <li>4. User database management enhancement.</li> <li>5. Support policy based user database.</li> <li>6. Support policy based captive portal.</li> <li>7. Support PPTP VPN client mode: DSR could be a VPN client connecting to a PPTP server and share this PPTP tunnel with users behind DSR.</li> <li>8. Add new Internet settings, WAN3 setting: WAN3 interface is designated to 3G connections via USB dongles. (Available on DSR-1000/1000N only)</li> <li>9. Support SMS (Short Message Service) features. This feature is available when a USB 3G modem is connected to DSR router and 3G WAN interface is not configured as dedicated WAN mode or load balancing mode. Also, please make sure your service provider allow your SIM card to send/receive SMS through 3G network. (Available on DSR-1000/1000N only)</li> <li>10. Update CLI commands including VPN utilities CLI support.</li> <li>11. Enable classical and NAT routing option in PPTP server configuration.</li> <li>12. Support Firewall rules over VLAN.</li> <li>13. IPsec VPN enhancement: allowing users selecting multiple integrity, authentication and encryption method for phase1 &amp; phase2 negotiations.</li> <li>14. Support a check box to block all URLs for Web site filtering feature. If users add some approved URLs, these URLs will be allowed.</li> <li>15. It's able to show logging message through CLI.</li> </ul>
1.03B43_WW	<ul style="list-style-type: none"> <li>1. Support SMTP ALG.</li> <li>2. Support full IPsec MIBs.</li> <li>3. OpenVPN enhancement – enabling gateway to gateway VPN tunnels.</li> </ul>
1.03B36_WW	<ul style="list-style-type: none"> <li>1. Intel AMT enhancements include Policy-based VPN configuration export for remote DSR router, AMT reflector modification, support DNS options for DHCP and DNS static host name mapping capability.</li> <li>2. Russia dual access PPTP/L2TP improvement.</li> <li>3. Support URL wildcard.</li> <li>4. Support to import/export a text or CSV file for keyword blocking. Keywords prevent access to websites that contain the specified characters in the URLs or the page contents.</li> <li>5. Built-in D-Link own certificate for SSL VPN code signing.</li> </ul>
1.03B27_WW	<ul style="list-style-type: none"> <li>1. Support WMM (Wi-Fi Multimedia) for DSR-500N and DSR-1000N.</li> <li>2. Support OpenVPN.</li> <li>3. Authentication and encryption method is modifiable in PPTP and L2TP.</li> <li>4. Support customized login page for captive portal.</li> <li>5. Captive Portal can take effective by different individual VLANs.</li> <li>6. Support private MIB for LEDs indicators of front panel.</li> </ul>

1.03B23_WW	<ol style="list-style-type: none"> <li>1. Support IKEv2.</li> <li>2. Support L2TP over IPSec.</li> <li>3. Support configuration auto-backup/auto-restore while a USB drive is inserted. Please refer to the implementation note for more detail of this document on page 2.</li> <li>4. Support SSL VPN CLI.</li> <li>5. Support Easy-Setup VPN feature. The benefit of this feature is that HQ IT/MIS can manually write a specific format file then deliver to non-IT background users of remote office. When the user imported this specific file in remote DSR router, all necessary VPN setting would be finished and ready for VPN tunnel establishment between HQ central site and remote offices.</li> <li>6. Support Intel AMT reflector.</li> </ol>
1.03B12_WW	<ol style="list-style-type: none"> <li>1. Support Non-Split tunnel for IPSec VPN.</li> <li>2. Support USB storage and printer sharing.</li> <li>3. Improve WAN configuration page based on drop-down menu.</li> <li>4. Support logging for SSL VPN activity.</li> <li>5. Support Interoperability with Cisco VPN client in iPhone OS4.</li> <li>6. Support NAT hair-pinning.</li> <li>7. Reverse the logs display, so that the latest logs are shown at the top of the viewer.</li> <li>8. Support DWM-152/156 A3 3G USB dongle. (This only affects in DSR-1000/1000N)</li> <li>9. Support for enable / disable Jumbo frames.</li> <li>10. Support for add / edit / delete routing table of secondary PPPoE tunnel.</li> <li>11. Spill over mode improvements - configurable maximum WAN bandwidth and load tolerance.</li> <li>12. Support captive portal.</li> <li>13. Support Blowfish and CAST-128 encryption-authentication algorithms in IKE Policy Configuration page.</li> <li>14. Support for IPSec policy option for AH alone (without ESP)</li> <li>15. Support for temporary blocking of user login for brute password attack.</li> <li>16. Available to choose the local traffic selector in VPN Wizard page.</li> </ol>
1.02B25_WW	<ol style="list-style-type: none"> <li>1. Added support for Russia PPTP/L2TP Dual Access.</li> <li>2. Support IPSec Failover</li> <li>3. Support for DWM-152/156 A1/A2 3G USB dongles with firmware 1.03 and 1.05</li> <li>4. Added support for RFC 3442 for DHCP client</li> </ol>
1.02B11	SSL VPN module upgrade to support SSL VPN on Windows 7 and Mac 10.6 operating systems
1.01B50	It's the first release.

## Changes of MIB & D-View Module:

DSR series can support LED MIB from firmware v1.03B27 and later.

## Problems Fixed:

Firmware Version	Problems Fixed
1.09B61_WW	<ol style="list-style-type: none"> <li>1. Captive portal support an option, administrator can allow/disallow "password change" for captive portal users.</li> <li>2. DDNS feature can work properly when DSR is deployed behind NAT router.</li> <li>3. <b>Security Vulnerabilities Addressed:</b> OpenSSL 0.9.8x does not properly restrict processing of ChangeCipherSpec messages, which allows man-in-the-middle attackers to trigger use of a zero-length master key in certain OpenSSL-to-OpenSSL communications, and consequently hijack sessions or obtain sensitive information, via a crafted TLS handshake, aka the "CCS Injection" vulnerability. <b>Reference:</b> CVE-2014-0224 <b>Solution:</b> Patched OpenSSL to 0.9.8za</li> <li>4. Improve CLI command to change multiple SSIDs with specific VLAN. <b>(DGC20140506000001)</b></li> <li>5. Fix bandwidth control issue <b>(DEUR20140423000001)</b></li> <li>6. Fix the issue to enable Invalid ICMP Packet log via CLI command. <b>(DI20140516000003)</b></li> <li>7. Fix unable to configure domain name of DHCP server as blank via CLI command. <b>(DI20140516000003)</b></li> <li>8. Fix the exporting blocked keyword issue. <b>(DRU20140521000001)</b></li> <li>9. Fix uPnP feature is not working properly. <b>(DEUR20140505000003)</b></li> <li>10. Fix DynDNS update fail when WAN is set to failover mode. <b>(DI20140521000005)</b></li> <li>11. Fix service name "Any" missing in Web GUI. <b>(DI20140521000003)</b></li> </ol>
1.09B59_WW	<ol style="list-style-type: none"> <li>12. Users can't save WDS settings after enabling WDS. <b>(DRU20140212000003)</b></li> <li>13. Removing debug messages from general console logs. <b>(DI20140110000001)</b></li> <li>14. After enabling "Enable Remote SSH" in the remote management setting page, users can't login DSR Web GUI from the WAN interface. <b>(DEUR20140117000002)</b></li> <li>15. When both WAN1 and WAN2 are working in the classical routing mode, DSR shouldn't force users to configure an internal IP address in destination NAT settings. <b>(DGC20140115000001)</b></li> <li>16. When users set a static IP address for Russia Dual Access L2TP WAN</li> </ol>

	<p>connections, DSR can't establish Internet connections with ISP.  <b>(DRU20140331000009)</b></p> <p>17. Even when users disable inter-VLAN routing in the VLAN setting page, users under the default VLAN, i.e. VLAN1, still are able to ping users under other VLANs. <b>(DEUR20140320000003)</b></p> <p>18. When Regional characters, e.g. Kanji, are used in a user name, DSR would fail to store this kind of user names in the local database. We'll restrict users to only use English characters or numbers in a user name.  <b>(DI20140116000006)</b></p> <p>19. There is a feature, VLAN on WAN support, missing in the previous formal release. <b>(DI20140416000004)</b></p> <p>20. More accurate progress as well as more execution information for firmware upgrade.</p>
1.09B38_WW	<p>1. WAN failure detection issues: DSR can't allow using a ping-detecting server that is not in the same subnet as gateway.  <b>(DEUR20121116000011)</b></p> <p>2. After delete IPsec one to one mapping rule, it could not drop the IPsec tunnel from DSR Web GUI.</p> <p>3. After delete the IPsec one to one mapping rule, local PC is still able to ping remote PC with mapping IP address.</p> <p>4. While changing the local network in IPsec policy, web GUI will display incorrect message.</p> <p>5. The CLI: <i>security firewall ipv6 configure/edit</i> doesn't work.</p>
1.08B88_WW	<p>1. Fix DSR cannot edit the VLAN via CLI when it has the max VLAN.</p> <p>2. Fix one-to-one LAN NAT issue <b>(DI20130704000001)</b></p> <p>3. Custom services port type: multiple ports, won't work when used in firewall rule with port forwarding <b>(DEUR20131028000008)</b></p> <p>4. Fix DSR shows incorrect SNMP information <b>(DEUR20130529000002)</b></p> <p>5. Fix device sporadic hard reboot issue <b>(DEUR20130813000001)</b></p> <p>6. Fix DSR cannot send itself traffic through IPsec site-to-site VPN tunnel  <b>(DEUR20130826000006)</b></p> <p>7. Fix WAN1/WAN2 port status and counters issue  <b>(DEUR20131016000004)</b></p> <p>8. Fix Wi-Fi 5GHz frequency channel list incorrect issue for TW and RU region. (DSR-1000N only)</p> <p>9. Fix CLI command "show net statistics all" does not include information related to WAN2 interface.</p>

	<p>10. CLI command "show net wan port_setup" doesn't display actual interface link speed.</p> <p>11. Update DSR's online help information for IPsec one to one mapping.</p> <p>12. Fix IPsec failover cannot roll back issue. <b>(DRU20131111000004)</b></p> <p>13. Fix following CLI doesn't work.</p> <pre>security firewall ipv6 default_outbound_policy security firewall ipv6 delete &lt;row_id&gt; security firewall ipv6 disable &lt;row_id&gt; security firewall ipv6 enable &lt;row_id&gt;</pre>

1.08B51_WW	<p>1. IPsec passthrough is not working for wireless clients.</p> <p>2. Multiple LAN users are able to access Internet using single captive portal account at the same time.</p> <p>3. Unable to play counter strike online from wireless clients.</p> <p>4. L2TP dialup can't allow pure numbers using in password and username.</p> <p>5. Unable to enable DMZ via CLI.</p> <p>6. PPTP/L2TP clients can't ping LAN clients under VLAN ID that is greater 10.</p> <p>7. Unable to add SSL VPN policy via CLI.</p> <p>8. Unable to check the status of SSL VPN tunnels via CLI.</p> <p>9. PPTP ALG is not working</p> <p>10. Device don't send DHCP-request messages after the end of T1 lease time (0.5*lease time).</p> <p>11. DWM-156 A3 is not working properly.</p> <p>12. When using management tools, traceroute, the first hop shows destination IP rather than router IP.</p> <p>13. Authenticated clients are redirected to the captive portal logout page while authenticated clients are trying to access Internet.</p> <p>14. Device allows LAN DHCP server range to overlap with sslvpn client address</p>

range.

15. Unable to configure the "date and time" field in the date and time page from CLI.
16. Unable to configure IPSec policy in transport mode from CLI.
17. While users copy a file over 600MB from Windows 7 LAN host to the USB drive, error messages will be popout.
18. LAN clients information don't show correctly in the 'LAN clients' page.
19. EPSON Stylus Photo 830 printer shows different model names in GUI and Back-end.
20. Device doesn't synchronize with correct time in different time zones. Also, device' time is still persisting after factory default.
21. After firmware upgrade, configured IPSec policy has be changed.
22. Device doesn't accept '0.0.0.0' in the IP address and subnet mask field in SNMP access control list page.
23. Device displays the error messages, 'i18nhtmlmissing', in the GUI while users try to disable "enable redundant policy" option in the primary policy.
24. DWM-156 A6 dongle is not working as 3rd/backup WAN.
25. DWM 156 A3 3G dongle is not mounted properly in some cases.
26. **Security Vulnerabilities Addressed:** Persistent root access.  
**Reference:**  
<http://packetstormsecurity.com/files/118355/D-Link-DSR-250N-Backdoor.html>  
**Solution:** Removed CLI commands that could allow someone to overwrite the super user password and gain root access to the device. Root user account will be completely removed in the next firmware version.
27. In some rare cases, device displays the error messages, 'i18nhtmlmissing', in the GUI while users try to disable "DHCP under VLAN".
28. Device shows miss-match authentication and encryption methods in the IPSec backup policy.
29. Device shows some meaningless messages in the logs.
30. Device can't accept remote IPSec endpoint as FQDN 0.0.0.0.
31. PPTP clients can access LAN networks but fail to access other VLAN networks.
32. "DNS request timeout" is observed in windows lan host while doing nslookup when iIPS/IDP is enabled in the device.
33. Clients' LAN-to-WAN traffics are redirected to http server on the lan side when inbound (WAN-to LAN) HTTP rules are added on WAN3.
34. Device doesn't show the WiFi current channel in the "Radio Settings" page and "WLAN Status" page when the default AP is disabled.

	<ul style="list-style-type: none"> <li>35. Removing some RD debug/meaningless logs.</li> <li>36. CLI issues: 1. there is no commands to select VLAN,DMZ and WAN3 interfaces for packet capturing. 2. Fail to change the file name saving the captured packets.</li> <li>37. DDNS is not updating the WAN IP address after disabling and enabling the DDNS functionality from the WAN status page.</li> <li>38. The 26th PPTP user in the database can't establish the PPTP tunnel to DSR even if the PPTP tunnel limitation is not reached.</li> <li>39. Unable to establish PPTP/L2TP tunnels if PPTP/L2TP clients' username or password includes "#" character.</li> <li>40. X.509 Cert for SSL VPN Tunnels is expired.</li> <li>41. ## Bug fixes having been scheduled into the next release:

Firmware Version	Reported Issues
Next Release	None

## Known Issues:

Firmware Version	Known Issues
1.09B61_WW	<ol style="list-style-type: none"> <li>1. In the WAN spill-over mode, DSR don't allow users to establish L2TP and L2TP over IPsec from Internet to WAN 2 when WAN 2 is not triggered to be active.</li> <li>2. When wireless clients paly multicast HD streaming, WAN performance will be seriously impacted.</li> <li>3. Transparent mode is only working on WAN1.</li> <li>4. There is an issue where the router is not able to transfer files &gt; 250MB from Windows XP to USB storage after apply WinXP.reg script file.</li> <li>5. Voice at LAN side client is not heard when the SIP Proxy resides in LAN.</li> <li>6. Daylight saving with manual settings is not working properly for Newfoundland and Greenland time zones.</li> <li>7. It's able to configure the same MAC address to WAN1 and WAN2 ports by selecting the 'Clone your PC's MAC Address' option.</li> </ol>

	<ol style="list-style-type: none"> <li>8. After editing the WEP profile (wep-64), another WEP profile (wep-128) wireless client is not reconnecting until disable/enable the corresponding SSID.</li> <li>9. Blank field for "data to supply to CA" when click view button in Self certificates requests page.</li> <li>10. VLAN dropped in and dropped out packet entries are incorrect in dashboard page.</li> <li>11. User cannot enable UPnP on LAN and VLAN simultaneously.</li> <li>12. Bandwidth rules over IPsec VPN tunnel are not being followed.</li> <li>13. Device keeps sending syslogs to syslog server after removing the earlier configured syslog server IP address.</li> <li>14. USB storage is not working perfectly with windows XP. It's not able to open files without copying them locally and it has issue to copy larger files from Network Storage share on to the Windows XP host. (Note: 1. Copy files from Windows XP to Network Storage works fine. 2. This issue doesn't affect Windows Vista, Windows 7 and Linux based operating systems)</li> <li>15. IPSEC tunnel is not getting established after importing the exported file at the remote device until disable then enabling policy</li> <li>16. Snmpwalk takes long time to display IPsec details.</li> <li>17. Spillover threshold can't approach configured value very precisely.</li> <li>18. IPsec failover only works for specific scenarios, e.g. in site-to-site tunnel mode, IPsec failover will only happen in one of end points.</li> <li>19. Bandwidth control does not work when users select pre-defined services, e.g. http or "ftp.</li> <li>20. Specific Service support for inbound traffic management is not work.</li> </ol>

When device is configured using spillover mode and WAN2 is utilizing PPPoE to Internet, WAN2 will keep inactive, i.e. no responses to any requests from Internet, until spillover threshold value is touched.</li> <li>22. Bandwidth control does not work when users select pre-defined services, e.g. http or "ftp.</li> </ol>
1.08B77_WW	<ol style="list-style-type: none"> <li>1. DSR routers don't support IPv6 Firewall and VPN current. Following CLI still doesn't work at all. <i>security firewall ipv6 default_outbound_policy</i> <i>security firewall ipv6 configure/edit</i></li> </ol>

*security firewall ipv6 delete <row\_id>*

*security firewall ipv6 disable <row\_id>*

*security firewall ipv6 enable <row\_id>*

2. There is an issue where the router is not able to transfer files > 250MB from Windows XP to USB storage after apply WinXP.reg script file.
3. Voice at LAN side client is not heard when the SIP Proxy resides in LAN.
4. Daylight saving with manual settings is not working properly for Newfoundland and Greenland time zones.
5. It's able to configure the same MAC address to WAN1 and WAN2 ports by selecting the 'Clone your PC's MAC Address' option.
6. After editing the WEP profile (wep-64), another WEP profile (wep-128) wireless client is not reconnecting until disable/enable the corresponding SSID.
7. Blank field for "data to supply to CA" when click view button in Self certificates requests page.
8. VLAN dropped in and dropped out packet entries are incorrect in dashboard page.
9. User cannot enable UPnP on LAN and VLAN simultaneously.
10. Bandwidth rules over IPsec VPN tunnel are not being followed.
11. Device keeps sending syslogs to syslog server after removing the earlier configured syslog server IP address.
12. USB storage is not working perfectly with windows XP. It's not able to open files without copying them locally and it has issue to copy larger files from Network Storage share on to the Windows XP host.  
(Note: 1. Copy files from Windows XP to Network Storage works fine. 2. This issue doesn't affect Windows Vista, Windows 7 and Linux based operating systems)
13. IPSEC tunnel is not getting established after importing the exported file at the remote device until disable then enabling policy
14. Snmpwalk takes long time to display IPsec details.
15. Spillover threshold can't approach configured value very precisely.
16. IPsec failover only works for specific scenarios, e.g. in site-to-site tunnel mode, IPsec failover will only happen in one of end points.
17. Only first 25 PPTP/L2TP users in the user database can establish PPTP/L2TP tunnels.
18. When device is configured using spillover mode and WAN2 is utilizing PPPoE to Internet, WAN2 will keep inactive, i.e. no responses to any requests from Internet, until spillover threshold value is touched.

	<p>19. Bandwidth control does not work when users select pre-defined services, e.g. http or "ftp.</p>
